Hana Wondie is a dedicated and passionate **Full-Stack Web Developer** with a strong interest in building modern, responsive, and user-focused web applications. With hands-on experience across both front-end and back-end development, Hana enjoys transforming ideas into fully functional digital products that are clean, efficient, and visually appealing.

As a full-stack developer, Hana has solid experience working with core web technologies including **HTML, CSS, and JavaScript**, and has built interactive user interfaces using modern frameworks such as **React**. On the server side, Hana works comfortably with **Node.js and Express**, creating structured and scalable back-end systems and RESTful APIs that support real-world applications.

Hana has practical experience working with databases, particularly **MySQL**, and understands how to design, manage, and connect databases to web applications efficiently. This allows Hana to build complete end-to-end solutions, from front-end interfaces to back-end logic and data storage.

Through continuous practice and project-based learning, Hana has developed several real-world projects inspired by popular platforms such as **Amazon, Netflix, and Apple**. These projects demonstrate strong skills in layout design, responsiveness, user experience, and clean code structure. Each project was built with attention to detail and a focus on recreating professional, production-style websites.

In addition to large clone projects, Hana has worked on multiple smaller applications and websites, including interactive JavaScript projects such as a **Snake Game**, as well as various responsive landing pages. These projects reflect Hana's curiosity, creativity, and commitment to improving problem-solving skills through hands-on development.

Hana is a motivated learner who keeps up with current web technologies and modern development practices. Always eager to explore new frameworks and tools, Hana continuously improves technical skills while striving to write maintainable, scalable, and readable code.

Beyond technical ability, Hana brings a strong work ethic, adaptability, and a collaborative mindset. Whether working independently or as part of a team, Hana values clear communication, attention to detail, and delivering high-quality results that meet user and business needs.
